$_1.6.x (you have to tick all of the choices, when installing the plugin) Postgre database at http://www.postgresql.org/download$

$_HOME, ANT_HOME and JAVA_HOME. For example:$

$_HOME = C:$

$jboss...ANT_HOME = C:$

$ProgramFiles$

$apache - ant - 1.8.0$

$_HOME = C:$

$ProgramFiles$

$java$

$jdk6...$

$_HOME; JAVA_HOME; ANT_HOME;$

IMPORTANT: Do not put your jboss folder on folders with spaces in their names (e.g., c:

program files).

IMPORTANT: Usually Eclipse sets the server timeout for 50ms. You should extend it to 500ms prefera

$_HOME' in the 'build.properties' file. If working in Windows, be careful to input backslashes in the same way that is in the file.$

$_HOME/server/default/lib'. Run it from command line:' java - jar h2 - 1.1.100.jar' or just double - click it from IDE.$

$_HOME/server/default/lib'). The driver file (postgresql - 8.4 - 701.jdbc3.jar) is located at your project home/lib (e.g C:) h$

$_HOME update your JAVA_OPTS at run.bat file set JAVA_OPTS =$
